Experiment-1

→ Algorithm :

(i) Let n = size of nums

(ii) for i = n-1 → 1

for j=0 → i-1

nums[j] = (nums[j] + nums[j+1] % 10

(iii) return nums[0];.

→ Code :

```
int triangularSum (vector& vector<int> & nums){
    int n = nums.size();
    for(int i= n-1; i>0; i--){
        for(int j=0; j<i; j++){
            nums[j]=(nums[j]+nums[j+1])%10

        }

    }
    return nums[0];

}
```
